

DECLARATION – ABSENCE OF PFAS

PFAS (PerFluorinated Alkylated Substances)

Ceriano Laghetto, 01/01/2024

Over 4,700 types of alkyl substances (PFAS) are a group of widely used chemical substances that, over time, situate themselves in humans and the environment. They are known as “permanent chemical substances” because of their presence in our environment and our bodies. They have negative effects on health.

For this reason, Arca Polimeri declares that this type of substance is not intentionally used in its production system. Furthermore, Arca Polimeri declares that PFAS are not directly purchased.

However, Arca Polimeri products are not tested to check for any possible presence of the substance(s) mentioned above since this testing process is not a standard procedure within Arca Polimeri. Therefore, the presence of trace amounts in the product(s) coming from raw material impurities, the process, or an adventitious contaminant cannot be excluded.

This declaration applies only to the composition of granules. It may not be extended to end products obtained by any modification of the composition and/or processing conditions, which could lead to improper use of granules.

For any further information or questions regarding this regulation, we invite our customers to contact us at the following email address: francesco.arcadi@arcapolimeri.it
