

## REACH - SVHC STATEMENT

*Regulation (EC) No. 1907/2006 - Registration, Evaluation, Authorization and Restriction of Chemicals (REACH)*

*Ceriano Laghetto, 07/11/2024*

We hereby inform you that the thermoplastic compounds purchased by you are produced by Arca Polimeri through the transformation of "preparations", that are polymer mixtures with various additives, reinforcement, pigments and/or stabilizers.

According to the REACH regulation, "preparations" do not need to be registered separately, always on condition that the individual parts of the preparations are (pre) registered.

According to REACH, polymers are excluded from registration (Article 2, (9)).

Thus, since no new substance is produced during the transformation process, Arca Polimeri does not need to register any of its products under REACH regulation.

Arca Polimeri purchases all the raw materials from qualified suppliers and carries out a verification of the documentation of the raw materials purchased to comply with REACH.

Arca Polimeri has never received any letters of renunciation of (pre) registration of substances by its suppliers.

Regarding the presence of Substances of Very High Concern (SVHC) published by ECHA (last update 07/11/2024) we state that:

- according to the formulation, none of the substances listed by ECHA in the SVHC list are intentionally used in a concentration above the threshold limit of 0,1%.
- The first-choice materials supplied by Arca Polimeri Srl are SVHC free.

- For the compounds made by recycled or regrinded materials, we can count on REACH declarations made by our suppliers.
- Whenever we should be informed of the presence of the listed products in SVHC you will promptly be informed.
- The presence of SVHC in our compounds is not verified by laboratory tests but only by our supplier's documentation.

Even if the SVHC substances are not intentionally added, this does not exclude the presence of negligible traces caused by impurities contained in the components supplied by external parties and used in the production process.
